MARKETABLE PHOSPHATE ROCK IN JULY 1999

U.S. marketable phosphate rock production in July 1999 decreased 4% compared to the prior month, according to the U.S. Geological Survey (USGS). Annualized year-to-date production was 41.7 million metric tons, which was 6% lower than the total production in 1998.

Domestic phosphate rock sold or used, excluding exports for July, increased 6% from the prior month, at 3.6 million tons. Annualized year-to-date sales or use was 42.9 million tons, about 2% lower than the total for 1998.

U.S. producer ending stocks for July were 2% lower than the figure shown in June.

Some phosphate rock import data for Morocco are suppressed by the Bureau of the Census; total U.S. import tonnage was estimated by USGS to average 150,000 tons per month, or 1.8 million tons per year. July import data were not available at the time of publication.

Annualized domestic consumption for 1999 was calculated to be 44.7 million tons using annualized sold and used data and estimated trade data. Apparent domestic consumption for 1998, calculated from the sum of home deliveries and adjusted import data, was 45.0 million tons.
